

Dear Valued Partner,

VitaFlo™ is committed to remain your reliable partner and serve those in the Renal Community who need to find formula options tailored to their needs.

VitaFlo recently switched production of Renastart™ to a new manufacturing site, however we have had a few challenges. Due to this, we have reached a decision to revert to the previous production site to ensure continuous availability.

As a result, **effective January 2026**, we will be going back to the previous formulation. There are minor adjustments in the nutritional profile.

### **What is the Same?**

- Both are powdered formulas for pediatric kidney disease management.
- Both are packaged as 6 x 400 g cans.
- Both use the same scoop (7 g).
- Both require use under medical supervision.

### **How to Tell Them Apart at a Glance**

- **VitaFlo logo and band at the bottom**
- **Check for the B Corp logo**
- **Look for place of manufacture**
- **Check allergens**
- **Powder color**
- **Product codes and item numbers**

### **What do you need to do?**

- If you are a prescriber:
  - Due to the minor nutritional changes, you should not need to change current formula prescriptions. However, please review each patient individually to ensure current prescriptions continue to meet micronutrient needs.
  - If you use a formula calculator, please ensure the appropriate nutritional information for **Renastart** is added into the program.
- If you are a patient, contact your healthcare provider with any additional questions

We appreciate your understanding as we strive to provide the best possible products and solutions for children with kidney disease. For more information, please click to contact your [Strategic Account Manager](#).

Sincerely,

**VitaFlo** North America

**FOR USE UNDER MEDICAL SUPERVISION.** Not for intravenous use. For enteral use only (oral and tube feeding). Regular monitoring of nutritional status and electrolyte levels is required.
